RE: Fifty-Third Progress Report
Administrative Order on Consent for Removal Action
Wells G&H Superfund Site
Olympia Nominee Trust Property
60 Olympia Avenue
Woburn, Massachusetts
CERCLA Docket # 01-2004-0059

Dear Mr. Gardner:

GeoInsight, Inc. (GeoInsight) prepared this progress report to describe activities completed at 60 Olympia Avenue in Woburn, Massachusetts (the Site) during the fifty-third progress report period (October 21, 2008 to November 21, 2008). This report was prepared in accordance with the June 21, 2004 United States Environmental Protection Agency (USEPA) Administrative Order on Consent for Removal Action (CERCLA Docket No. 01-2004-0059; the "Order"). The report was prepared by GeoInsight at the request of Olympia Nominee Trust, current owner of the 60 Olympia Avenue property.

Additional Activities

Sodium permanganate injection activities were performed at the Site between November 10 and 14, 2008. Approximately 4,800 gallons of two to three percent sodium permanganate solution were injected inside the treatment cell. Approximately 94% of the sodium permanganate solution (4,500 gallons) was delivered to the subsurface via direct push injection methods using a geoprobe. The remaining 6 percent (300 gallons) were injected via gravity into existing injection wells and trenches.

Permanganate Monitoring

To evaluate the distribution of sodium permanganate after the October 2008 injection event, monitoring wells inside and outside the treatment cell (i.e., MW-200 series) were monitored for

the presence of permanganate (i.e., purple color) on a weekly basis, on October 23, 30, and November 6, 2008. Monitoring wells were visually monitored for color using a peristaltic pump and clear tubing. The results of these monitoring events will be presented in subsequent progress reports.

The next sodium permanganate injection event is scheduled to occur during the week of December 8, 2008.
